

ARROWS LOOK LIKE LINES OF ATTACK

Failed and deficient cartographic presentations

Arrows on maps have their origin in military cartography. They show military operations, attacks and advances. The message remains the same today. In the Frontex map reproduced here, the arrows are also oversized. They represent a total of 76,000 people, while the EU is home to 450 million people and the African countries named have a total population of 609 million.

*Frontex: European Border and Coast Guard Agency
